

Lab Sheet 2

1. Write a program to check if a given number (use the input command) lies between 1 and 100. If the number is outside the range, print 'Invalid Marks'; else print 'Marks accepted'.
2. Write a program to ask for a number and check if it is divisible by 5. Print appropriate output.
3. Write a program to ask for a year and check if it is a leap year. (A year that is *divisible by 4 but not by 100* or a year that is *divisible by 400*)
4. Write a program to accept the ages of 5 different people and return the age of the youngest person.
5. Write a program to accept a number from 1 to 7 and display the name of the day (1 is Sunday).
6. Write a program to accept the number of due days from a customer and print out the fine in rupees.

Days	Fine
1-7	2 rupees/day
8-14	3 rupees/day
15-30	5 rupees/day
After 30 days	10 rupees/day

7. Write a program to find the Taxi charge. The tariffs are given in the table below:

Kilometres	Amount
First 10 km	25 rupees/km
Next 30 km	15 rupees/km
Remaining km	10 rupees/km

Practice Questions:

```
number = int(input('Enter the number'))  
  
if number>0:  
    print('Number is positive')  
  
else:  
    print('Number is not positive')
```

```
num = int(input("enter the number:"))  
  
if num%2 == 0:  
    print("The Given number is an even number")  
  
else:  
    print("The Given Number is an odd number")
```

```

MIN_SALARY = 30000.0
MIN_YEARS = 2

salary = float(input('Enter your annual salary: '))
years_on_job = int(input('Enter the number of years employed: '))

if salary >= MIN_SALARY:
    if years_on_job >= MIN_YEARS:
        print('You qualify for the loan.')
    else:
        print('You must have been employed for at least', MIN_YEARS, 'years to qualify.')
else:
    print('You must earn at least' MIN_SALARY, ' per year to qualify.')

```

```

# Input age from the user
age = int(input("Enter your age: "))

# Check age group
if age > 0:
    if age < 13:
        print("You are a child.")
    else:
        if age < 20:
            print("You are a teenager.")
        else:
            if age < 60:
                print("You are an adult.")
            else:
                print("You are a senior citizen.")
else:
    print("Invalid age entered.")

```

```

num= int(input("Enter the number between 0 and 4"))
if num==0:
    print('ZERO')
elif num==1:
    print('ONE')
elif num==2:
    print('TWO')
elif num==3:
    print('THREE')
elif num==4:
    print('FOUR')
else:
    print('NOT in a range')

```

```

# Pre-defined correct username and password
correct_username = "user123"
correct_password = "pass456"

# Input username and password from the user
username = input("Enter your username: ")
password = input("Enter your password: ")

# Check if username is correct
if username == correct_username:
    # Nested if to check if the password is correct
    if password == correct_password:
        print("Login successful!")
    else:
        print("Incorrect password.")
else:
    print("Invalid username.")

```
